

Northwind Desk — Product Guide

Getting started

Northwind Desk is a customer-support helpdesk. Create an inbox, connect your support email address, and invite teammates. Incoming emails become tickets that can be assigned, tagged, and resolved.

Ticketing

Tickets have a status (open, pending, resolved), an assignee, tags, and a full conversation history. Internal notes are visible only to teammates. Merging combines duplicate tickets from the same customer.

Automations (Pro and Enterprise)

Automations route tickets by keyword, set priorities, and send auto-replies outside business hours. Automations are available starting on the Pro plan.

Integrations (Pro and Enterprise)

The Slack integration posts new tickets and replies into a Slack channel and lets agents respond without leaving Slack. The REST API and Zapier connector support custom workflows. Integrations require the Pro plan or higher; the Starter plan does not include integrations.

Reporting

Dashboards track first-response time, resolution time, and CSAT. Reports can be exported as CSV on Pro and Enterprise.
