

Northwind Desk — Security and Data Policy

Data retention and deletion

When an account is closed, all customer data — tickets, contacts, attachments, and analytics — is permanently deleted 30 days after the closure date. This deletion is irreversible. Within the 30-day window the account can be reopened and data fully restored. Any action that deletes or modifies stored customer data requires human supervisor approval before execution.

Authentication

Passwords must be at least 12 characters. Password reset links are valid for 60 minutes and single-use. Two-factor authentication is available on all plans and required for Enterprise administrator accounts. Support staff can trigger a password-reset email but can never view or set a customer password.

Data access by support staff

Support agents may view account metadata and ticket contents to resolve issues. Access to stored payment details is restricted to the billing system; agents see only the last four digits of a card. All support access is logged in the audit trail.

Compliance

Northwind Desk is SOC 2 Type II certified and GDPR compliant. Data is encrypted in transit (TLS 1.2+) and at rest (AES-256). Data export requests are fulfilled within 30 days.
